

GREEN LIGHT

FIRE ANT CONTROL WITH CONSERVE[®]

**For Use In Home Gardens (One Acre Or Less).
No Watering Needed – Kills The Queen.**

Treats 10,900 Sq. Ft. Or Treats 22 Mounds.

Active Ingredient: Spinosad 0.015%

Size: 1 Pound Bag

Usage & Application:

Directions: Mounds: Sprinkle 4 tablespoons of bait evenly over and around each mound in a 4 ft. diameter circle. Apply gently to avoid disturbing ants. **Broadcast Application:** Use a hand-held or ground driven rotary broadcast spreader. Use ½ to ¾ cup for each 1,000 sq. ft.

Do not water within 6 hours of mound application or 24 hours of broadcast application. If rain occurs within 6 hours of mound application or 24 hours of broadcast application, adequate foraging of the bait may not occur and retreatment may be necessary.

Green Light Fire Ant Control is attractive and deadly to fire ants. Fire ants quickly find/pickup this bait, take it back to the mound, and feed it to the entire colony including the queen(s). Ants start dying in 24-36 hours with mound/colony destruction in 3 to 14 days. Broadcast applications may take longer.

Fire ant colonies are started by newly mated queen(s) that fly into an area, burrow into the ground and begin laying eggs. Several flights are common during the summer, often shortly after rains. It takes several weeks for new mounds to appear. Combining mound and broadcast applications eliminates/controls visible mounds and helps prevent new mounds from forming.
