SECTION 5 - HEALTH INFORMATION**PRIMARY ROUTES OF EXPOSURE AND TARGET ORGANS**

Inhalation, eye and skin contact, ingestion

SIGNS AND SYMPTOMS OF EXPOSURE**(1) ACUTE OVEREXPOSURE**

May be harmful if inhaled in sufficient quantities. Symptoms may include breathlessness, wheezing, cough and sputum production. May be irritating to the eyes, skin, mucous membranes, nasal and respiratory passages. Ingestion may cause GI irritation and central nervous system (CNS) depression. CNS depression may include symptoms of drowsiness, slow reflexes and slurred speech. A component of this product is a diuretic.

(2) CHRONIC OVEREXPOSURE

Prolonged exposure to dust of Fuller's earth may cause a relatively benign lung disease, though there is a risk of the development of massive fibrosis. Repeated and prolonged exposure to respirable crystalline quartz, which may be contained in this product, may cause delayed lung injury including silicosis. Silicosis is a form of disabling pulmonary fibrosis which can be progressive and may lead to death. Repeated or prolonged skin contact may cause skin irritation.

MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE

Disorders of the eyes, skin, respiratory system, and central nervous system.
